ProForce-Series

Sustainability made "easy"

WIDER RANGE – LESS WEIGHT

Under the name “ProForce”, we have developed a range of adhesives that sets new standards in terms of sustainability and protecting both the environment and installers: ProForce products stand out with their up to 70% greater coverage and up to 40% lower consumption. In concrete terms, this means that it takes only 75 kg of adhesive to bond 100 m² of parquet instead of 130 kg of a conventional parquet adhesive. This adds up to 55 kg less material that needs to be purchased, transported from the manufacturer to the installer and carried to the construction site. True to the slogan “Wider range – less weight” in this way STAUF saves energy and resources and protects both people and the environment.

ADVANTAGES AS STANDARD

The ProForce adhesives STAUF SPU 510, STAUF M2A 910 and STAUF PUK 410 also feature outstanding properties such as higher strengths combined with greater elasticity, improved dimensional stability and optimal consumer and environmental protection, since they do not contain any non-reactive or migratory components.

RETHINKING MADE EASY

STAUF is also committed to sustainability when it comes to packaging its ProForce products. The buckets of the new adhesives are made from 100% recycled plastic obtained from consumer waste. No fossil raw materials are needed for its production, which saves 36% CO₂ per bucket! The recycle buckets without a metal handle can easily be 100% recycled again after use with no extra effort.

- solvent-free
- very low emissions
- best possible emissions class

- 36% CO₂ saving
- new recyclable plastic handle
- bucket made of recycled material
